

MUHAMMAD REHAN KHIMANI

Backend Developer | Node.js | Express.js

03243187077 / 0335-3092925 | muhammadrehanabdulqadir@gmail.com

SUMMARY

Backend-focused Software Engineer experienced in building scalable backend systems, RESTful APIs, database-driven applications and SaaS communication platforms using Node.js and Express.js. Skilled in backend architecture, authentication and authorization, database design, third-party API integrations, real-time communication workflows, billing systems and production debugging. Currently working on SaaS platforms involving SMS, Voice, WhatsApp, AI-driven automation, IVR, campaign management, wallet-based billing and high-volume communication workflows. Working knowledge of JavaScript/TypeScript, React.js and Next.js for frontend-backend integration.

WORK EXPERIENCE

Backend Engineer (SaaS Communication & AI Systems) | Outhentica Global Feb 2026 – Present

- Designed and developed scalable backend architecture for a SaaS communication platform supporting SMS, Voice, WhatsApp and AI Agent services.
- Built and maintained RESTful APIs (Node.js, Express.js) for campaign management, user operations, billing, authentication and communication workflows; implemented JWT authentication and role-based access control.
- Designed MySQL schemas, relationships, optimized queries and transactional workflows; improved application performance and reliability through query and process optimization.
- Developed bulk SMS and automated voice campaign execution systems with scheduling, retries, delivery tracking and reporting, handling high-volume request processing at scale.
- Built wallet-based billing and usage management (SMS usage, voice minutes, AI agent consumption, balance deduction, transaction tracking) and resource management for service catalogs, pricing models and subscription packages.
- Designed and implemented IVR workflows with dynamic call flows, routing logic and interactive user responses.
- Integrated third-party APIs and communication services (SMS, Voice, WhatsApp, AI), including AI Agent workflows for automated conversational systems.
- Implemented logging, monitoring, reporting and debugging workflows for production systems; used Git/GitHub for version control and deployment workflows.
- Collaborated with frontend, QA and product teams to integrate REST APIs; joined system design discussions and translated business requirements into scalable backend solutions.

Junior Software Developer | WallSoft Technologies Internship → Full-Time

- Developed and maintained web applications using C#, ASP.NET MVC, JavaScript, Bootstrap and Tailwind CSS; integrated frontend interfaces and React.js components with MVC controllers and database-driven modules.
- Worked on employee profiles, attendance, payroll, salary processing and data management modules; used Redux, Context API and TypeScript.
- Debugged application and API integration issues to improve functionality and reliability; used Git and GitHub for collaboration.

CORE BACKEND EXPERTISE

- API Development: RESTful APIs, Authentication, Authorization, JWT, Third-Party Integrations
- Database Development: MySQL, SQL, Database Design, Query Optimization, Transactions
- SaaS Systems: Campaign Management, Subscription Management, Wallet Billing, Usage-Based Billing
- Communication Systems: SMS, Voice, WhatsApp, IVR, Real-Time Communication
- AI & Automation: AI Agent Integration, Automated Communication Workflows, Business Automation
- Development Practices: Git/GitHub, Debugging, Logging, Monitoring, Performance Optimization

EDUCATION & TRAINING

INTERMEDIATE	PRESENT
MATRICULATION – SAYLANI MASS IT TRAINING	2025
FULL STACK WEB DEVELOPER – SAYLANI MASS IT TRAINING	2024
